Installation Steps

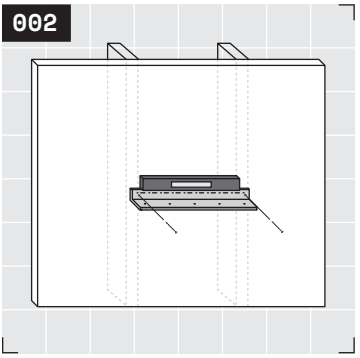

001

Determine where you want to install your Moxie table. Locate the wall studs or blocking behind the mounting surface. Using a measuring tape and level, mark a line on your wall approximately ¾" higher than the leg height of your table. This line indicates where to align the fastener holes on the cleat.

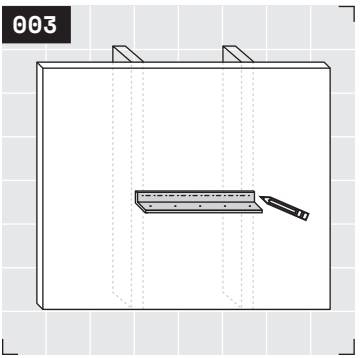

See **Rad Tip** ① on page 7 for more information on studs and blocking. For masonry installs, see **Rad Tip** ②.

002

Position the cleat against the wall with the mounting holes aligned with the wall studs and the horizontal line you just drew. Level the cleat, then secure it to the wall using the appropriate fasteners for your wall type.

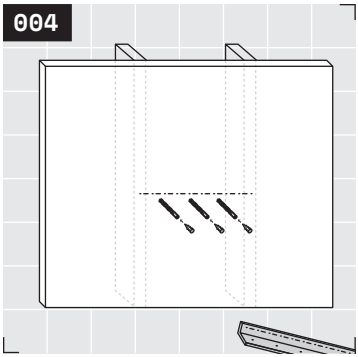

003

Double check the cleat position on your wall and adjust if necessary. Mark all fastener holes and slots with a pencil. Once every fastener location has been marked, uninstall both fasteners and remove your cleat from the wall.

004

Predrill each drywall anchor location roughly every six inches. Use a ¼" drill bit to avoid breaking drywall anchors.

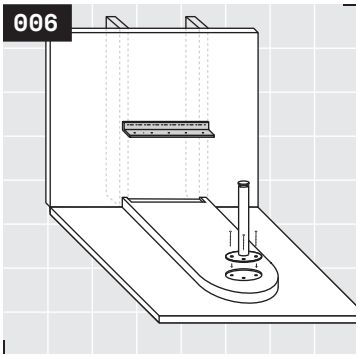

Install a drywall anchor in each of these pre-drilled locations. If you are using your own anchors, we recommend Toggler brand for best results. Stud locations should not be pre-drilled. Drywall anchors should be installed flush with the drywall surface.

005

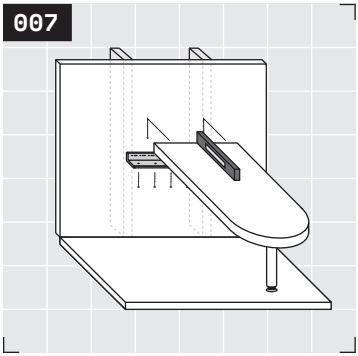

Replace the cleat and install a truss head fastener into every location crossing a stud, blocking, or wall anchor.

006

Position the leg over the notch in the tabletop and align the mounting holes. Secure the leg to the underside of the tabletop using the provided pan head fasteners. Tighten firmly.

007

With the cleat securely mounted, place the tabletop onto the cleat, making sure it is fully seated and properly aligned. Fasten cleat to tabletop.

Place a level on the tabletop and turn the foot clockwise or counterclockwise to raise or lower the table until the foot makes firm contact with the floor and the tabletop is level from front to back. The foot provides approximately 1" of adjustment to accommodate uneven floors.

That's it! Reach out to a Shelf Geek today if you need any further assistance.

Warnings

① Correct Install Required For Safe Use

1.1 Tables must be correctly installed into studs or wall blocking. Failure to do so may result in sagging tables, falling objects, or serious injury.

② Adhere To The Capacity Rating Of Your Specific Product

2.1 Every Shelfology product has been engineered for use with specific capacities. Failure to follow our specified capacity ratings may result in sagging shelves, falling objects, or serious injury. Please reference the Moxie Spec Sheet for more information.

③ California Proposition 65 Warning

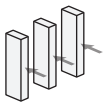

3.1 This product contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. Don't eat this product. If you live outside of California, do whatever you want. For more boring information, visit www.p65warnings.ca.gov.

④ Not For Use In Wet Environments

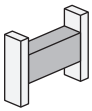

4.1 Powder coated carbon steel does not equal waterproof. If water has direct and constant contact with the product, like in a shower or outdoors, it will rust. Shelves installed in these conditions are not covered by our warranty.

Rad Tips

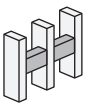

① Fasten Into All Studs & Blocking The Table Crosses

1.1 Studs are the vertical 2x4 boards that make up the bones of your walls. They provide solid structure for your table to attach to.

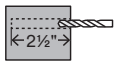

1.2 Blocking is typically added later between studs in the wall for additional support to mount table to, and is usually made from 2x4 or 2x6 lumber.

1.3 For a contractor grade install with best substrate strength, install blocking along the length of your table.

② Masonry Installation

2.1 Hold product in position and mark hole placements. Drill each marked location with a ¼" diameter masonry drill bit. Drill at least 2½" deep to allow for the 2½" wall fastener.

2.2 Using a hammer, tap masonry anchor into hole, flush with wall surface.

2.3 Hold product in position, and install masonry fasteners into anchors.
